In the 1960s Ozbekhan worked as management consultant to large [multinational corporations](#). The work he did for governments includes Science Policy design for Turkey and a large study for the French Government analyzing the nature of present events that, most probably, will shape the future of Paris. The recommendations derived from these analyses currently constitute the basis of the policies adopted by the French Government with respect to the city's long-term development.

He died on February 12, 2007 in Philadelphia.

Work

Özbekhan applied the field-of-systems theory to global problems, helped inspire the group of planners, diplomats, scientists and academics who came together as the Club of Rome. He wrote a paper, "The Predicament of Mankind," that became an influential core document of the group, addressing issues of energy, overpopulation, depletion of resources and environmental degradation. [1](#) [1](#)

In the 1970s Özbekhan was co founder and first director of The Club of Rome, with [Aurelio Peccei](#) an

Italian Industrialist, and

[Alexander Christakis](#)

, a physicist and systems research designer. Özbekhan wrote the original prospectus for The Club of Rome,

The Predicament of Mankind

. This document served as vision for systems scientists who, under the leadership of Alexander Christakis and the

21st Century Agoras

developed the science of structured dialogic design. Özbekhan is credited for the formulation of the

Axiom of Engagement

Together with [Robert Jungk](#) , [Johan Galtung](#) and many others he was member of **MANKIND 2000**

Publications
